DETAILED ACTION

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-9 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-49 of copending Application No. 10/294,205 in view of Yadav et al. (Yadav), U.S. Patent 6,267,864. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims of the prior patent application fully encompass the claims of the instant application.

The instant claims differ from the copending claims by the limitation that the catalyst is subjected to an electric current before the catalyst contacts the

reactant. The Yadav discloses the step of applying a current at the start of the process and stopping the current to let the reaction progress (see claims 1-37).. It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the claims of the prior application with the teachings of the Yadav patent, because the Yadav patent teaches the application of the current and then stopping the current to let the reaction progress and to prime the catalyst by the application of current before would be an obvious modification of such as step.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.
